"Unusual ancestry of dehydratases associated with quinate catabolism in Acinetobacter calcoaceticus.";

J. Bacteriol. 177:5971-5978 (1995).

-I- FUNCTION: CAN ACT EITHER ON QUINATE OR ON SHIKIMATE.

-I- CATALYTIC ACTIVITY: QUINATE + PYRROLOQUINOLINE-QUINONE = 5-
DEHYDROQUINATE + REDUCED PYRROLOQUINOLINE-QUINONE.

-I- CATALYTIC ACTIVITY: SHIKIMATE + PYRROLOQUINOLINE-QUINONE.

-I- CATALYTIC ACTIVITY: SHIKIMATE + PYRROLOQUINOLINE-QUINONE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            039086;
